Seventh Generation - An American company with headquarters in Burlington, Vermont. The company manufactures plant based personal care products.

Whole Foods 365 - An environmentally friendly supermarket brand with a focus on organic and natural products.

Where to Buy?

Health Benefits of Using Eco-Friendly Disposable Diapers

When using eco-friendly diapers, babies have less exposure to chemicals and irritants. You can expect fewer diaper rashes, and less time spent in soggy diapers.

Eco-Friendly Disposable Diapers

Health Risks of Non Eco-Friendly Diapers

Dioxin a known carcinogenic chemical by the EPA. Banned globally except in the United States.

Tributyl-tin (TBT) a toxic pollutant that causes a hormonal imbalance in animals and humans.

Sodium Polycrylate (SAP) is an absorption chemical that was removed from tampons because it caused toxic shock syndrome.

Impact of Diapers to the Environment

Disposable Diapers take up to 500 years to decompose. The breakdown of landfill diapers releases toxic chemicals into the food and water supply.

The average baby will use between 6,000 to 8,000 diapers. The resources used to manufacture a diaper are: petroleum, plastic, trees, bleaches and artificial fragrances. A one year diaper supply will need 16 oil tankers.

What to look for in Eco-Friendly Diapers

Chlorine free - Chlorine treated diapers causes exposure to dioxin which can lead to rashes and body impairments.

Fragrance and Dye free - Allergies to the dyes and fragrances are common due to chemical irritants.

Biodegradable - What percentage of the diaper is biodegradable, flushable, or compostable?

Compostable - A number of manufacturers have compostable diapers which allow the diapers to be home compostable or sent to a composting facility.

Absorbency - Does the diaper contain non-toxic gel or natural plant based absorbents such as corn and wheat.

Award Winning - A number of manufacturers have won awards based on innovations in being safe, socially conscious, style, design, and having a light footprint on the environment.

Are Eco-Friendly Diapers Special?

Eco-friendly diapers are similar to regular disposable diapers except they lack a number of harmful chemicals to both your baby and the environment. Eco-friendly diapers are bleach and chlorine free. Some manufacturers use wood pulp and plant based materials for absorbency. These can be thrown in the trash with minimal impact to the environment.
